/note—weetor: pME18S-FL3; Site_1: DraIII (CACTGTGTG);
/note=avector: pME18S-FL3; Site_1: brail cDNA was primed
Site_2: DraIII (CACCATGTG); lst strand cDNA was primed
with an oligo(dT) primer [ATGTGGCTTTTTTTTTTTTTTTT];
double-stranded cDNA was ligated to a DraIII adaptor
[TGTTGGCTACTGG], digested and cloned into distinct DraIII
sites of the pME18S-FL3 vector (5' site CACTGTGTG, 3' site
CACCATGTG). XhoI should be used to isolate the cDNA
insert. Size selection was performed to exclude fragments
cloth. Library constructed by Dr. Sumio Sugano
(University of Tokyo Institute of Medical Science).

```

```
double-stranded cDNA was ligated to a Draill adaptor [TGTTGGCTACTGG], digested and cloned into distinct Draill stress of the pME18S-FL3 vector (5' site CACTGTGTG, 3' site CACCATGTG). Mold be used to isolate the cDNA insert. Size selection was performed to exclude fragments cl.5kb. Library constructed by Dr. Sumio Sugano (University of Tokyo Institute of Medical Science). Custom primers for sequencing: 5' end primer CGACCTCGAGAGAGA."

//doce="Vector: lambda pSB; Site_l: BamHI; Site_2: ECORI;
First strand cDNA was primed with an anchored
XhOT-oligo(dT) primer [5'GGAGACTCGAGCGCGCAGGAGGAG(T)VN
3'; V=A,C,G; N=A,C,G,T] and then dG tailed. Second strand
was primed with a BamHI-dC primer
[5'AGAGACTCGGATCGCGCCCCAATAATAATAATAAT(C) 3']
Double-stranded cDNA was then digested with BamHI and XhOI
and directionally cloned into the BamHI and SalI sites of
lambda pSB vector. Library went through one round of
normalization. Library was constructed by Wei Yu at RIKEN
of Japan (Carninci P, Westover A, Nishiyama Y, Ohsumi T,
Itoh M, Nagaoka S, Sasakin, Okazaki Y, Muramatau M,
Schneider C, Hayashizaki Y, High efficiency selection of
full-length cDNA by improved biotinylated cap trapper.,
DNA Res 4: 1, 61-6, Feb 28, 1997)"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi;

```
The sequence represents a novel human lipid metabolism enzyme (LME-2) of
the invention. The invention relates to novel human LME's, and the
comply the invention relates to novel human LME's, and the
polynucleotides which identify and encode them. The enzymes of the
invention have cytostatic, neuroprotective, immunosuppressive,
comit inflammatory, and cardiovascular activity. The polypeptides and
polynucleotides have a use in gene therapy and enzyme therapy. The lipid
compouls enzymes are useful in the diagnosis, treatment and prevention
compounds menzymed isorders, autoimmune/inflammatory disorders, and
cordiovascular disorders, and in the assessment of the effects of
cardiovascular disorders, and in the assessment of the effects of
cardiovascular disorders, and in the assessment of the effects of
compounds on the expression of nucleic acid and amino acid
compounds that modulate the activity of LME. Polynucleotides encoding
compounds that modulate the activity of LME. Polynucleotides encoding
compounds that modulate the activity of energe to detect and
compounds in the disease, to generate a transcript image of a
tissue or cell type, to generate hybridization probes useful in mapping
the naturally occurring genomic sequence, and for screening libraries of
compounds in drug screening techniques. The polypeptide sequences may be
used to analyse the proteome of a tissue or cell type. Oligonucleotide
primers derived from polynucleotide sequences encoding LME may be used to
cetect single nucleotide polymorphisms.
                                                                                      New lipid metabolism enzymes useful for diagnosing, treating and preventing cancer, neurological disorders, autoimmune/inflammatory disorders, and cardiovascular disorders
                                                                                                                                                                                                                          Claim 1; Page 109; 122pp; English.

New human proteins, useful for diagnosing, treating, preventing and/or prognosing disorders related to the proteins, including cardiovascular disorders, autoimmune disorders and reproductive disorders

Claim 11; Page 306-307; 318pp; English.

The invention relates to novel human proteins (NHP) and the concision and the nucleic acids that encode them and antibodies raised against them. In the proteins, antibodies and nucleic acids are useful in the diagnosis, The proteins, antibodies and nucleic acids are useful in the diagnosis, prevention and/or treatment or diseases and/or disorders convolution vasoconstriction, erectile dysfunction, high blood pressure, cachexia, disorders of small intestine, disorders of reproductive system cachexia, disorders of small intestine, disorders of pulmonary system, and other hyperproliferative disorders, disorders of pulmonary system, and other hyperproliferative disorders, bone disorders, neurodegenerative contral nervous system disorders, bone disorders, disorders disease, Parkinson's disease, Huntington's disease, schizophrenia, mania, dementia, paranola, consider, learning disabilities, amyotropic lateral sclerosis, psychoses, autism, sleep disorders (e.g. multiple sclerosis, ischemmic contral nervous system disorders (e.g. multiple sclerosis, ischemmic contral injury and/or stroke), infectious diseases, diabetes mellitus, immunological disorders (e.g. asthma, acquired immunodeficient syndrome contral sequence represents an NHP of the invention.

PLA2 has antiallergic, antinflammatory, antibacterial, tranquillser, immunosuppressive, vulnerary, antirheumatic and antiarthritic activities. Human secretory phospholipase A2 (PLA2), the gene encoding it and antibodies against it are useful for the diagnosis and treatment of secretory PLA2-associated diseases e.g. septic shock, trauma, pancreatitis, allergic rhinitis and chronic rheumatoid arthritis. The present sequence represents human PLA2.

                                                                                                                                                                                                                                                                                                                                                  4;
                                                                                                      The present sequence is human phospholipase I (HPPLI). This protein is involved in the hydrolysis of membrane phospholipids. The protein and its coding sequence can be used to diagnose and treat the following: cancers such as prostate, breast and testicular cancers, autoimmune and inflammatory disorders such as AIDS, allergies, anaemia, asthma, atheroselerosis, Crohn's disease, diabetees mellitus, emphysema, Graves' disease, irritable bowel syndrome, multiple sclerosis, myasthenia gravis, psoriasis, rheumatoid arthritis and systemic lupus erythematosus, infection caused by viruses, fungi, bacteria, parasites and protozoa, and reproductive disorders including infertility, disruptions of the menstrual cycle, polycystic overy syndrome, ectopic pregnancies, disruptions of spermatogenesis, cancers within the reproductive tract

The invention relates to polynucleotides encoding proteins CG122, CG179, CG654, CG121, CG162, CG27, CG153 and CG168 which are related to proteins involved in lipid metabolism and cardiovascular disease such as human polipoproteins. lipases and lipoprotein receptor proteins. These DNA apolipoproteins and lipoprotein receptor proteins. These DNA can protein sequences are useful for treating or preventing disorders expression and for treating lipid metabolism, cardiovascular diseases and thrombosis. Antibodies against these proteins are useful for and thrombosis. Antibodies against these proteins are useful for cardiovascular diseases and thrombosis. Antibodies against these proteins are useful for useful for identifying agents (agonists and antagonists) that bind to therm and cells expressing ALLr proteins are useful for identifying a cherant expression or physiological interactions of this polypeptide. Overtors comprising these DNA and protein sequences are also useful for use in treatment of occlusive cardiovascular diseases, myocardial infarction, cerebral isothemia, angina, arterial chrombosis, coronary artery thrombosis and cerebral artery thrombosis of the invention are also useful for the reatment of occlusive cardiovascular chrombosis, coronary artery thrombosis and cerebral artery thrombosis of are used in gene therapy. The present sequence is human CG95 (or C870)
                                                                                                                                                                                                                                                                                                                                                                                                                             Nucleic acids encoding human apolipoproteins, lipases, and lipoprotein receptor polypeptides, useful for preventing diagnosing and treating lipid metabolism disorders, thrombosis and cardiovascular diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               63 CCHAHDCCYQELFDQGCHPYVDHYDHTIENNTEIVCSDLNKTECDKQTCMCDKNMVLCLM 122

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention provides the protein and coding sequences of novel broteins from a variety of organisms, including human, dog, cat, horse, cow, pig, hamster, monkey, macaque, yeast, bacteria, fruit fly, sea urchin and tomato. These were derived from expressed sequence tags (ESTs) from the organism of interest. They can be used in diagnostics, forensics, gene mapping, identification of mutations, to assess biodiversity and for nutritional purposes. The present sequence is a protein of the invention.

AAM25966 to AAH99904 encode the human proteins given in AAM25255 to
CC AAM25963. The proteins can have activities based on the tisques and
cells they are expressed in, such as: antiniflammatory; antirheumatic;
antiarthritic: immunosuppressive; antibacterial; endocrine: cardiant;
cardiavascular; antianaemic; antiagregant; heemostatic; unimaragen;
cardiavascular; antianaemic; antiagregant; heemostatic; unimaragen;
cardiabetic; cytostatic; neuroprotective; antidepressant; nootropic;
antiparkinsonian; and immunostimulant. The proteins and polynucleotides
concoding them can be used in gene therapy, antisense therapy and vaccine
concoding them can be used in gene therapy, antisense therapy and vaccine
concoding them can be used in gene therapy, antisense therapy and vaccine
concoding them can be used in gene therapy, antisense therapy and vaccine
concoding them can be used in gene therapy, antisense therapy and vaccine
concoding them can be used in gene tivity of a protein e.g. inflammation,
concorpostulosy, cardiac anaphytaxis, viral, bacterial, HIV and fungal
infections, autoimmunity, genetic diseases, hematopoietic disorders,
costeoporosis, asthma, diabetes, cancer, multiple sclerosis, depression,
contentions, asthma, diabetes, cancer, multiple sclerosis, depression,
contentions and disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               4

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        This sequence represents a mouse secreted phospholipase A2 (secreted PLA2). A cDNA was initially identified in an EST (expressed sequence tag) database, and a fragment (AAA72077) was isolated from cDNA derived from several mouse tissue types using primers AAA72078-A72081). The full length cDNA was generated using primers AAA7208-A72088. The invention relates to the novel secreted PLA2, nucleic acids encoding it, and variants of the protein which retain phospholipase A2 activity. It also encompasses an expression vector and host cells comprising DNA encoding murine secreted PLA2, a method for the recombinant production of the protein, a method of screening potential inhibitors of the protein and the compounds thus identified, and an antibody specific for murine PLA2. The antibody can be used for the diagnosis of a variety of diseases.

The present invention describes human secretory phospholipase A2 (PLA2). PLA2 has antiallergic, antiinflammatory, antibacterial, tranquillser, immunosuppressive, vulnerary, antirheumatic and antiarthritic activities. Human secretory phospholipase A2 (PLA2), the gene encoding it and antibodies against it are useful for the diagnosis and treatment of secretory PLA2-associated diseases e.g. septic shock, trauma, pancreatitis, allergic rhinitis and chronic rheumatoid arthritis. The present sequence represents mouse PLA2, which is used in an example from
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  64 CHAHDCCYQELFDQGCHPYVDHYDHTIENNTEIVCSDLNKTECDKQTCMCDKNMVLCLMN 123

This invention relates to human secretory phospholipase A2 (PLA2) protein and the gene encoding it. Inhibitors of phospholipase A2 have antibacterial; immunosuppressive; antinitammatory; tranquilliser; vulnerary; antiasthmatic; antiallergic; antirheumatic; and antiarthritic activity. The PLA2 protein, gene and an anti-PLA2 antibody are useful in the diagnosis of PLA2 associated diseases e.g. septic shock, adult respiratory distress syndrome, pancreatitis, trauma, bronchial asthma, allergic rhinitis and rheumatoid arthritis. The present sequence is used in the invention for the identification and characterisation of the human PLA2.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Human secretory phospholipase A2 and encoded gene, useful in diagnosis of and screening drug candidates for treating associated diseases e.g. septic shock, adult respiratory distress syndrome and rheumatoid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         DWCCHAHDCCYQELFDQGCHPYVDHYDHTIENNTEIVCSDLNKTECDKQTCMCDKNMVLC 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention describes a mouse secretory type phospholipase A2 (PLA2) protein. The mouse secretory type PLA2-like protein can be used for screening in the development of inhibitors against the function of the protein. The present sequence represents mouse secretory type PLA2.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     DWCCHAHDCCYQELFDQGCHPYVDHYIENNTEIVCSDLNKTECDKQTCMCDKNMVLC 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              This invention relates to human secretory phospholipase A2 (PLA2) protein and the gene encoding it. Inhibitors of phospholipase A2 have antibacterial; immunosuppressive; antiinflammatory; tranquilliser; vulnerary; antiasthmatic; antiallargic; antirheumatic; and antiarthritic activity. The PLA2 protein, gene and an anti-PLA2 antibody are useful in the diagnosis of PLA2 associated diseases e.g. septic shock, adult respiratory distress syndrome, pancreatitis, trauma, bronchial asthma, allergic rhinitis and rheumatoid arthritis. The present sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Human secretory phospholipase A2 and encoded gene, useful in diagnosis of and screening drug candidates for treating associated diseases e.g. septic shock, adult respiratory distress syndrome and rheumatoid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 80 HPYVDHYDHTIENNTEIVCSDLNKTECDKQTCMCDKNMVLCLMNQ--TYREEYRGFLNVY 137

clone lambda SPLA2cDNA-4 is one of four clones identified when probe oligo 2905 (AAN91257) was used to screen a cDNA library constructed from polyA+ message from a peritoneal cell RNA. It encodes the entire SPLA2 type A sequence which is given here. The mature peptide sequence (see FT) has a calculated molecular weight of 13,919 daltons. The same

The protein sequence was deduced from a DNA sequence obtd, from a genomic DNA library which was prepd. from a mutant fibroblast cell genomic DNA library which was prepd. from a mutant fibroblast cell allowable to a the which contains 5 copies of the x chromosome (GM5009). The style allowable to be incomplete at the N-terminal since no promoter-like sequences are found in the DNA within 100 nucleomature protein confirmed results obtd. by direct sequencing of the mature protein confirmed results obtd. by direct sequencing of the putified protein. This sequence represents an amphiphilic alphateristic putified protein. This sequence represents an amphiphilic alphateristic putified protein of PLA_2 mols. It has highly conserved lipophilic residues (e.g. Leu (25), phe (25), and lie (29) and there is a cluster of basic amino acids (e.g. Arg (27), Lys (30) and Lys (35)] of PLA_2. There is a characteristic stretch of residues which complises part of the calcium binding loop: Tyt(4)-cly-cys-x-cys-wich constitute the acitive site (see features) are also present, and the protein exhibits the placement of half-cysteine residues typical of a Gp II PLA_2, having a Cys residue at position 70 and a half cysteine at the C-terminal. (The consensus sequence was and C. array wonom atrox venom.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        This sequence is encoded by the phospholipase A2 (PLA2) CDNA. The CDNA was amplified using the primer sequences given in AAQ26370-1 by PCK from a human lung cDNA library. The CDNA sequence was used in promoter and a dominant control region. This vector was used in a expression system comprising a mammalian cell transformed with the vector. This expression system could be used to prepare bharmacologically useful polypeptides eg. human growth hormone (HGH), granulocyte-colony stimulating factor (G-CSF) and PLA2, and for gene therapy. The mammalian host comprises erythroid cells and a
